

A full-bodied, concentrated, non-staining, water soluble lubricant for conveyor chains in food processing plants, dairies, etc.

Where To Use

Food processing plants	Bakeries
Bottling plants	Dairies

Dilution and Directions

In general, one part of LONG LIFE to 75 parts of water is a good starting point for conveyor chains. A higher dilution will perform satisfactory. Some installations will perform well at a concentration of 1/4 gallon per 50 gallon. These are two general methods of use:

1. DIRECT FEED - LONG LIFE is injected directly into a pump feed system. An alternative method, instead of using a pump is to use a siphon injector.
2. DILUTION METHOD - A stock solution is made up using 1/4 gallon of water. This mixture is then pumped onto chain for lubrication.

Technical Specifications

COLOR:	Transparent Gold	STORAGE(Unopened):	. 1 Year @R.T.
FORM:	Liquid	BIODEGRADABLE:	... Yes
SCENT:	Odorless	WEIGHT/GAL: 8.5
pH:	9.5	SHIPPING CLASS: None
FLASH POINT:	None	USDA:.....	H-2
PACKAGING:	.. 5 gal, 30 gal, 55 gal		
TYPE:	Concentrated Lubricant
